

**Step 1:** When the StackUnderFlow App opens the user may view the most recent questions, answers and the number of answers each questions has received.

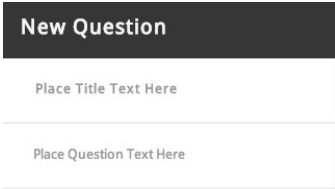

**Step 2:** The user chooses to access more options by pressing the overflow menu at the top right of the screen. The user chooses to press the "Ask a Question" option from the overflow menu.

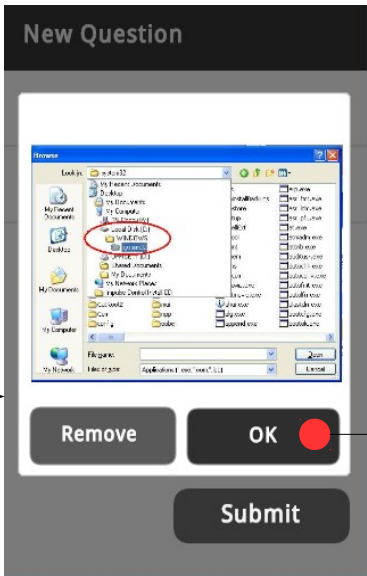

**Step 3:** When the user presses the "Ask a Question" option they are asked to input a username. The user inputs "gregthegreg" and presses the "OK" button the app stores this username on the device and will sign all posts made by the user with that username.

**Step 4:** The user is brought to the New Question Screen. Now the user enters the title for they're question as well as the question text.

**Step 5:** Below the question text field there is a button labeled "upload photo". The user chooses to press this button which brings them to Android Photo selection screen. Once the user has selected the image they wants; they are given a preview of the image. By pressing the "Ok" button the user is returned to the new question screen.

**Step 6:** The user reviews their title, question text and image. The user decides they are happy with the input they then presses the "Submit" button.

**Step 7:** The User is brought to the question page of the question they just submitted.
